AI notices: ECCS Buddy and the other AI features

What the app tells people where AI is used, and what each AI feature sends outside India.

AI provider	Anthropic (the Claude API), USA
Buddy chats kept	30 days after the chat's last message, then deleted (built)
Who uses Buddy	The restaurant's Owner and Managers

Some features send data to Anthropic, the company that makes the Claude AI models, which processes it in the USA. None of this is in the Privacy Policy or the Data Processing Terms yet (see the brief, section 5). Below: what each feature sends, and what the person is told on screen.

1. ECCS Buddy, the helper for Owners and Managers

BUDDY'S WELCOME, WITH "WHAT BUDDY CAN DO" OPENED

> **Hi, I am ECCS Buddy**
>
> Ask me about the app or your kitchen.
>
> Answers how to do things in the app, and questions on food safety, cleaning, pests and running a kitchen.
>
> Looks up today's checklists, visits, your score, licences, invoices, plan, issues, inspections, SOPs, labels and vendors.
>
> Gets ready for your tap: booking or cancelling a service request, checklist items and checklists, SOPs, food labels, and messages to ECCS.
>
> Never pays, changes your plan, uploads documents or reads staff attendance, pay or faces. It opens those screens for you.
>
> Answers are written by AI and can be wrong. Chats are kept for 30 days.

Under Buddy's latest answer: "Written by AI, which can be wrong." What is sent to Anthropic: the person's messages, and what Buddy looks up to answer them (checklists, visits, bookings, the score, licences, invoices, the plan, issues, inspections, SOPs, food labels, vendors). Never phone numbers, PINs, staff names, attendance, pay or faces. Chats are kept in ECCS's database for 30 days after their last message, then deleted automatically (built).

Messages about harm. If someone writes that they want to die or to hurt themselves or someone else, Buddy answers with India's free Tele-MANAS line (14416 or 1-800-891-4416) and 112, and tells no one. Such a message is information about a person's health; it is sent to Anthropic and kept 30 days like any chat.

2. The other AI features

Feature	What is sent to Anthropic	What the person sees
Reading a licence or document	The photo or PDF of a licence or document (may show a holder's name, address or photo)	Read by AI. Check each field before saving.

Feature	What is sent to Anthropic	What the person sees
Proof-photo check (daily checklists)	A small copy of each checklist proof photo. Staff-hygiene checks ("staff in clean uniform") show staff, faces included; the AI is told never to identify anyone	This photo looks blurred. Retake? … Checked by AI, which can be wrong. Only you see this.
Photo standard	The restaurant's checklist item, once, to write what its photo must show	Nothing separate
Translating support messages	Messages between a restaurant and ECCS (may name people)	Translated by AI, with "See original"
Translating the restaurant's own content	Its typed checklist items, SOPs and food-label names	Translated by AI
"Why this score?"	The facts behind the outlet's hygiene score, without numbers	Written by AI from your score.
Inspection report summary (ECCS Supervisors)	The inspection's answers and the Supervisor's notes	While editing: "Drafted with AI: check it before saving." On the printed report: "Drafted with AI help and checked by the inspector."
Monitoring digest (ECCS console)	Facts about outlets on ECCS's monitoring board	For ECCS staff only
Shop-board reader (ECCS sales staff)	A photo of a prospect's shop board, to read the name, address and phone number	AI fills in the name and address

Never sent to any AI service: attendance, clock-in photos, face templates or enrolment photos, salaries and pay, PINs, and ECCS employees' joining files.

Anthropic's terms (as read on 14 October 2026, to be checked): under its commercial terms it deletes what is sent within 30 days by default (longer for anything flagged under its usage policy); a "zero data retention" arrangement can be agreed with its sales team.

Points for the lawyer

1. What must the Privacy Policy (sections 13 and 14) and the Data Processing Terms (section 9, sub-processors) say about Anthropic, the purposes and the transfer to the USA? Changing them means everyone agrees again at their next login.
2. Proof photos of staff go to Anthropic for the hygiene check. Do staff need a notice through the restaurant?
3. Prospects' shop-board photos are read by AI before any agreement with that business. Is a notice needed?
4. Messages about self-harm are health information sent abroad. Should ECCS do more, or less, with them?
5. Is "Drafted with AI help and checked by the inspector" enough on an inspection report?
