01 · DATA INVENTORY

Data we ask for, and data we give

Every kind of personal data the ECCS app and console collect, why, who sees it and for how long; then everyone outside ECCS who receives any of it. Checked against the app as built on 23 October 2026.

[In yellow] blanks to fill in before launch · [to confirm] choices the drafter marked for confirmation

1. What we ask for or collect

Grouped by whose data it is. "Kept for" says what the app does today; where the Privacy Policy's draft promises something not yet built, it says so.

Whose data	What	Why	Who can see it	Kept for
Restaurant users: Owner, Manager, Head Chef	Name; role and outlets; the Owner's mobile number and one-time login codes; PIN (kept only as a keyed hash); each linked phone's name, failed PIN attempts and login sessions; app language; optional email and profile photo; the record of each agreement (document 07: version, fingerprint, time, IP address, device, app version).	Accounts and secure login; showing each role only what it may see; proof of the contract	Restaurant's own users; ECCS staff as needed	While the login is active. Draft: delete within 1 year after removal [to confirm]; not built
The restaurant business and its outlets	Business name, GSTIN, billing address; each outlet's name, address and map location; contact people's names and phone numbers.	Visits, invoices, contact; checking where photos were taken	Restaurant users; ECCS staff	While the account is active (nothing deletes it yet)
Restaurant employees (ECCS processes this for the restaurant)	Name, job title, phone, joining and leaving dates, pay type, salary or daily wage, overtime rate, weekly day off; clock-in and clock-out times, how (face or PIN), flags and corrections with reasons; salary record entries (days, pay, overtime, bonuses, advances, deductions, payments).	The restaurant's attendance and salary records	Owner, and Managers as allowed. Never ECCS staff	While the account is active
Face attendance (biometric), only with the employee's consent (document 08)	Face templates (encrypted); the consent record (version, language, time) and any withdrawal; a small photo at each clock-in and clock-out.	Knowing it is the employee who clocks in	Matching only on ECCS's server; photos seen by Owner and Manager	Templates: until withdrawal or leaving (built). Clock-in photos: 35 days (built)
Daily checklists and proof photos	Ticks, notes, times and who filled them in; proof photos (staff-hygiene checks show staff, faces included); if allowed, the phone's location, its accuracy and distance from the outlet; each photo's fingerprints (exact and near-identical), the phone's time against the server's, and Android's "mock location" flag.	The kitchen's own hygiene record; the score; spotting doubtful photos	Restaurant users. ECCS's Super Admin and Ops Manager can open doubtful ones (since 20 Oct)	While the account is active
Service visits, inspections, support	Bookings, visit times, tasks, chemicals; ECCS's before and after photos; the sign-off (name, role, signature where asked, rating, comment); reports, certificates, inspection findings, scores; issues and messages with ECCS, with photos.	Delivering and proving the work; complaints	Restaurant users; ECCS staff	While the account is active. Draft: 3 years after closure for visit records [to confirm]

Whose data	What	Why	Who can see it	Kept for
Licences and documents	Licence numbers (FSSAI, trade, fire), expiry dates and copies, which may show a holder's name, address or photo.	Storage and expiry reminders; the score	Restaurant users; ECCS staff	While the account is active
Food labels	Item names and times, and the name of the person who printed the label.	The kitchen's own records	Restaurant users	While the account is active
Billing	Plan, invoices, GST details, amounts, payment status, payment references and the type of method. No card or bank login details (none are taken: online payment is not connected yet).	Billing and GST law	Owner; ECCS staff	At least as long as GST law requires (about 7 to 8 years)
ECCS Buddy (AI helper)	The Owner's and Managers' chat messages (typed, or spoken and turned into text by the phone), and what Buddy looked up to answer.	Answering questions about the app and the kitchen	The person who chatted	30 days after the chat's last message (built)
Notifications	Each phone's push token; the notifications sent and whether they were read.	Telling people about visits, reports, reminders and replies	The person	While the login is active
Technical and activity log	For every change anyone makes, for some opens (report, certificate and invoice PDFs, legal documents, joining files) and for every refused or failed request: who, what, when, the result, the IP address, the device's ID, the app or browser, the app's version. Just looking at a screen is not logged here.	Security, fraud prevention, fixing faults, legal duties (CERT-In)	ECCS's Super Admin and Ops Manager	365 days, then deleted by a daily job (built)
Usage counts (since 23 Oct 2026)	For every logged-in person: how many times each day they opened each screen of the phone app or the console (the screen's name, never which record), with their role and restaurant and the first and last time that day. Nothing about what was on the screen.	Seeing which restaurants and people use the apps, and which parts; supporting those who use it less	ECCS's Super Admin only	365 days, then deleted by a daily job (built)
Diners and website visitors	Nothing asked. The server receives the IP address, browser type, page and time with each request; the app keeps none of it, except for a refused or failed request (the activity log). Whether the web server in front keeps its own access logs is to be checked.	Delivering the page, security	ECCS (logs)	Not kept, except refused or failed requests (365 days)
Prospects (sales leads, before any agreement)	Business name, area, address and map location; contact's name and phone; who referred them; a photo of the shop board; calls, visits, notes and follow-ups; the free hygiene check's findings; quotes, and how often and when a quote's link was opened.	Selling ECCS's services	ECCS's sales staff and founders	Nothing deletes it. Not covered by the Privacy Policy
Partners and vendors	Names, roles, phones and emails of people at partners; the vendor directory (business name, area, address, phone and WhatsApp, hours, FSSAI number).	Arranging partner services; showing nearby vendors	Restaurant users see vendors; ECCS staff	Draft: up to 1 year after the relationship ends [to confirm]

Whose data	What	Why	Who can see it	Kept for
ECCS's own employees (document 12)	Phone, name, role, area, joining date, salary, leave; joining file (date of birth, parent's name, addresses, emergency contact, blood group, uniform size, ID type and last 4 digits, PAN, bank account and IFSC, previous employer, UAN, ESI number, education); documents (photo, ID and address proof, bank proof, police verification, medical fitness, relieving letter, education); letter and handbook acceptances; Supervisors' check-in location at each visit.	Employment, salary, legal records, clients' security	The founders and the person; the Ops Manager sees progress only	Nothing deletes it. Not covered by the Privacy Policy

2. What we give to others

Every organisation outside ECCS that receives personal data, what it receives, and where. ECCS does not sell personal data, uses no advertising or analytics trackers, and sets no cookies on its public pages.

Who receives it	What	Where	Why	Today
Amazon Web Services (AWS)	Everything: the server and its database, and the file store (photos, documents, PDFs)	India (Mumbai)	Hosting and storage	Live since 20 Oct 2026
Anthropic (Claude AI)	For the AI features (document 10): documents and licences, support messages, the restaurant's own checklist items, SOPs and labels, score facts, inspection notes, checklist proof photos, prospects' shop-board photos, Buddy chats. Never attendance, pay, faces, clock-in photos, PINs or phone numbers	USA	AI features	Live. Not yet in the Privacy Policy
Expo (push service) and Google Firebase Cloud Messaging; Apple's push service for iPhones	Each phone's push token, and each notification's text (may name an outlet, a task or an employee)	Outside India (USA)	Delivering notifications	Live. The Privacy Policy names Firebase only
Google or Apple speech recognition	What an Owner or Manager says to Buddy after tapping Speak	Possibly outside India	Turning speech into text, on the phone	Live, on the person's phone
The public	Only if the Owner turns the customer page on: the restaurant's name and city, ECCS's inspection score, grade, date and report number, how many days the checklists were done, recent service dates and certificate numbers, the FSSAI number, approved kitchen photos. Never staff names, prices or bills	Web	The customer page (document 11)	Live
ECCS partners (laboratories, training, medical camps)	For a booked partner service: the outlet's name, address, contact person and booking details	India	Delivering that service	The app sends nothing to partners itself
WhatsApp, Google Maps and the phone's share sheet, when a person taps them	What that person chooses to send from their own phone: a quote to a prospect, a reminder, the joining link to a new hire, a chat with ECCS support, a staff member's new PIN, a staff pay record; or an outlet's location opened in Google Maps	The person's own apps	Convenience	ECCS's server sends nothing
Authorities	What the law requires, when it requires it (for example CERT-In incident reports, a court order, tax authorities)	India	Legal duties	Nothing automatic

Who receives it	What	Where	Why	Today
SMS provider (MSG91, planned)	The Owner's and staff's phone numbers and one-time login codes	India	Login codes	Not connected: a fixed test code is used
Payment provider (Razorpay, planned)	Payment details, collected by the provider directly	India	Online payments	Not connected: no payments are taken

Done on ECCS's own server, with no other company: face matching, making every PDF, and reading a licence when the AI is switched off (a free text reader then reads it).

3. Sensitive personal data

The kinds the IT Act's SPDI Rules 2011 treat as sensitive (in force until May 2027), and where the app holds them.

Kind	Where the app holds it	Rule
Passwords	PINs of restaurant users (kept only as keyed hashes)	SPDI Rule 3(i)
Financial information	ECCS employees' bank account number and IFSC, and their PAN. Salary records (restaurant staff's and ECCS employees') may also count	SPDI Rule 3(ii)
Health condition, medical records	ECCS employees' blood group and medical fitness certificates; restaurant staff's certificates if a restaurant uploads them; Buddy messages about self-harm	SPDI Rule 3(iii), (v)
Biometric information	Face templates of consenting restaurant employees	SPDI Rule 3(vi)

4. What we never ask for or keep

- A whole Aadhaar number: the forms refuse it, and a document sent back is deleted at once.
- Card numbers, UPI PINs or banking passwords.
- Location in the background, or at any time except the moment of a proof photo or a Supervisor's check-in.
- The photos used to make a face template.
- Anything from diners or website visitors beyond what every web server receives.

5. Deletion: built and not built

Built and running	Promised in the drafts, not built yet
• Clock-in photos after 35 days • Face templates at withdrawal or leaving • Buddy chats 30 days after their last message • The activity log after 365 days • Usage counts after 365 days • Customer-page photos and inspections drop off the page after 90 and 180 days	• Export for 30 days after an account closes, then deletion within 90 days • Users' details within 1 year of their login being removed • Support messages, partner contacts: 1 year after • Backups within 30 days. Today the file store keeps deleted files' old versions for 90 days, and the server takes a daily snapshot (the last 7 kept) • Nothing yet for prospects or ECCS employees who leave
