ECCS

A briefing for the business development team

What ECCS is, what we sell, how our app works, and the tools you use. Read this before your first meeting with a restaurant.

Eosfera Commercial Cleaning Services, Hyderabad
Version 2 · 19 October 2026 · For people inside ECCS only
Replaces version 1 of 13 October 2026. Page 3 lists what is new.

ECCS in one minute

Start here. If you read only one page, read this one.

Who we are

ECCS is a company in Hyderabad. We keep restaurant kitchens clean, safe and ready for inspection.

We do two things together:

- **Services.** Our team goes to the kitchen and does the work: deep cleaning, chimney cleaning, pest control, safety checks and more.
- **An app.** The restaurant's own staff use it every day. It shows what was cleaned, what was checked, and how the kitchen is doing.

Who our customer is

Any business with a working commercial kitchen in Hyderabad: restaurants, cafés, bakeries, cloud kitchens and hotel kitchens. The person who decides is usually the **owner**. The person who uses the app most is the **manager** or the **head chef**.

The problem we solve

- A restaurant calls many different people: one for cleaning, one for pest control, one for the chimney. Nobody keeps one record.
- Daily cleaning depends on staff remembering. The owner cannot see if it was done.
- Licences expire and nobody notices until there is a problem.
- When a food safety officer visits, the papers and proof are hard to find.
- Customers have no way to know if the kitchen is clean.

Our answer

One company for the kitchen's cleaning and safety work, and one app that keeps the proof: photos, dates, reports and certificates, all in one place.

THE LINE TO REMEMBER

“ECCS cleans and services your kitchen, and gives you an app that shows it is done, every day.”

WHERE WE ARE TODAY

We are just starting. The app is built and is being tested. **No restaurant is using it yet.** Our first goal is 3 to 5 restaurants, then 15 to 20. Page 20 says exactly what is ready and what is not. Please read it before you promise anything.

What is new since version 1

Version 1 was dated 13 October 2026. If you have read it, read this page, then the pages it points to.

What	In short	Pages
ECCS Buddy	An AI helper in the restaurant app, for the owner and the manager. It answers their questions, looks up their day, and gets changes ready that they confirm with one tap.	12–13
AI help in the app	The app reads a photo of a licence into the form, explains the hygiene score in two sentences, checks proof photos, and translates what people type. A person always checks. AI never sets the score.	7–9, 11
Agreeing to the terms	At the first login, the owner agrees to the terms and the privacy policy for the restaurant. Managers and head chefs agree too.	6
Your own app	The BDE (sales executive) screens in the ECCS app: Do today, logging a lead from a photo of the shop board, the free-check scorecard, and quotes on WhatsApp. They work with no signal.	16–17
Sales in the console	Every lead, from New to On a plan, with weekly targets. You see only your own leads.	18
For the ECCS office	New console pages for the team, money and a record of everything done; a short AI summary on the monitoring board; and an AI first draft of the inspection summary for the Supervisor.	15
Words and questions	New questions owners ask about AI and Buddy, and new words.	21–24

WHAT HAS NOT CHANGED

- **No restaurant is using the app yet.** It runs on our office computer for testing.
- **Prices are still samples.** That includes the prices in quotes.
- **Do not sign any agreement and do not take any money** until the founder tells you we are ready (page 20).

The simple rule for AI in our app

AI helps people do things faster: it reads, explains, translates and gets things ready. **A person always checks, and nothing is changed until a person taps to confirm.** AI never gives a score, a grade or a pass or fail.

What we sell

Services for the kitchen. The app comes with them.

Group	Service	What it means, in simple words
Cleaning	Kitchen deep clean	A full clean of the kitchen: floors, walls, equipment and drains.
	Chimney and hood cleaning	Removing oil and grease from the hood and pipe above the stove. Old grease can catch fire.
	Grease trap cleaning	Cleaning the box that catches oil before it goes into the drain.
Pest control	Pest control	Regular treatment against cockroaches, rats and flies.
Testing	Fire and equipment safety inspection	A check of the kitchen's fire safety and equipment.
	Water test	A test to see if the kitchen's water is safe.
	Frying oil test	A test to see if the frying oil is still good to use.
Compliance (following the rules)	Food Safety Supervisor training	Training for the staff member who looks after food safety.
	FSSAI hygiene rating readiness	Helping the restaurant get ready for FSSAI's hygiene rating.
	Staff medical check-up camp	Health check-ups for the people who handle food.
Supplies	Cleaning chemicals refill	Bringing the cleaning liquids the kitchen needs.

Some services are done together with an ECCS partner. The app says so when the restaurant books one.

How a restaurant buys

- **It usually starts with a free check** (page 17), then a first paid job, then a plan.
- **A monthly plan.** The restaurant pays every month and gets a set of services on a fixed schedule. There are two sample plans in the app now, called **Essential** and **Complete**.
- **One service at a time.** The restaurant can also book a single service from the app when it needs one.

ABOUT PRICES

Prices are not final. Every price you see in the app today is a sample, in the restaurant's app and in your quotes. Do not tell a restaurant a price unless the founder has given it to you.

The big picture

There are four parts. Each is for a different kind of person.

1. Restaurant app
On a phone. For the restaurant's owner, manager and head chef.

2. Staff screens
The same app, with other screens: for the ECCS Supervisor, and for you, the BDE.

3. ECCS console
A website. For ECCS office staff, to run the whole business. You use its Sales page.

4. Customer page
A web page. For diners, who open it by scanning a QR code.

Who uses what

Person	Works for	What they do
Owner	The restaurant	Sees all branches. Sees the hygiene score, books services, pays bills, adds staff, switches the customer page on or off. Can ask ECCS Buddy.
Manager	The restaurant	Runs one branch. Checks the daily checklists, books services, looks after licences, staff and salary records. Can ask ECCS Buddy.
Head Chef	The restaurant	Works in the kitchen. Fills in the daily checklists with photos, prints food labels, reports problems.
Supervisor	ECCS	Goes to the kitchen. Records each service visit and each inspection in the app, with photos.
Sales executive (BDE)	ECCS	**You.** Finds restaurants, logs leads, does free checks and sends quotes, in the app and on the console's Sales page.
Operations Manager	ECCS office	Uses the console. Adds clients, plans visits, checks reports, watches all kitchens and the team.
Super Admin	ECCS office	The founders. Can do everything in the console.
Diner	The public	A customer eating at the restaurant. Scans the QR code and sees the kitchen's hygiene page. No login.

Four things that make the app easy for a kitchen

12 languages
English, Hindi, Telugu, Urdu and eight more. Each person chooses their own.

No signal needed
Checklists and visits are saved on the phone and sent when the signal comes back.

One shared phone
Each person has their own 4-digit PIN, which decides what they see.

AI help
AI reads, explains and translates. A person always checks.

The restaurant app: opening it

What the restaurant sees first.

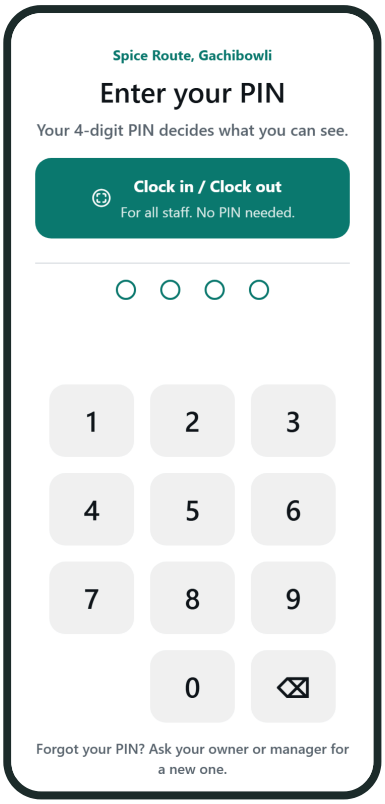

Logging in

- The first time, the **owner** types their mobile number and a one-time code. The app then shows the owner a **4-digit PIN**.
- The owner creates PINs for the manager and head chef inside the app.
- ECCS gives each branch a short **outlet code**. A kitchen phone is set up by typing that code once. After that, it asks only for a PIN.
- The PIN decides what a person sees. An owner sees everything. A head chef sees only the kitchen's work.

ECCS staff, you included, log in differently: with their phone number and a one-time code.

Clock in / Clock out

The big button on this screen is for attendance. A staff member taps it and looks at the camera. No PIN is needed. More on page 11.

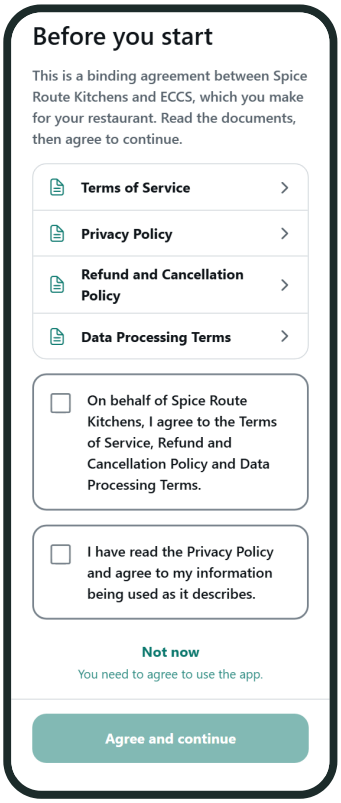

The first screen: the PIN pad, with Clock in / Clock out on top

Agreeing at the first login NEW

- The first time the owner logs in, the app shows one short screen with ECCS's documents: the Terms of Service, the Privacy Policy, the Refund and Cancellation Policy, and the Data Processing Terms.
- The owner can open and read each one, ticks the two boxes, and taps **Agree and continue**. This is a binding agreement between the restaurant and ECCS. Without it, the app cannot be used.
- Managers and head chefs agree to the Terms and the Privacy Policy at their first PIN login.
- Everyone can read the documents again at any time, in **Profile > Legal**.

The documents are drafts that a lawyer is checking. They are in English only for now.

The owner's agreement screen (sample restaurant)

The restaurant app: home and the score

The one number the owner looks at every day.

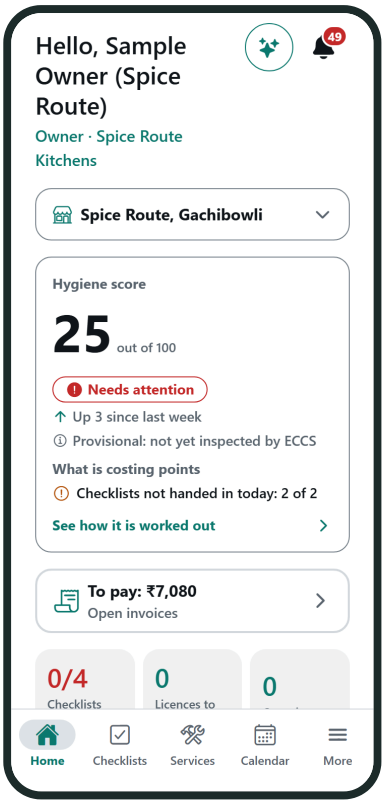

Home, and the hygiene score

The home screen shows one big number: the **hygiene score**, out of 100. It tells the owner how the kitchen is doing today.

The score is made of	Points
ECCS's inspection of the kitchen	60
The kitchen's own daily checklists	30
Licences that are in date, with a copy saved	10

- Under the number, the app says **what is costing points**, so the owner knows what to fix.
- Until ECCS has inspected the kitchen, the score is "provisional" (not complete yet).
- The round **sparkle button** at the top opens **ECCS Buddy** (page 12).

> **Important:** this is ECCS's own score. It is **not** a government rating and not an FSSAI rating. Never call it that.

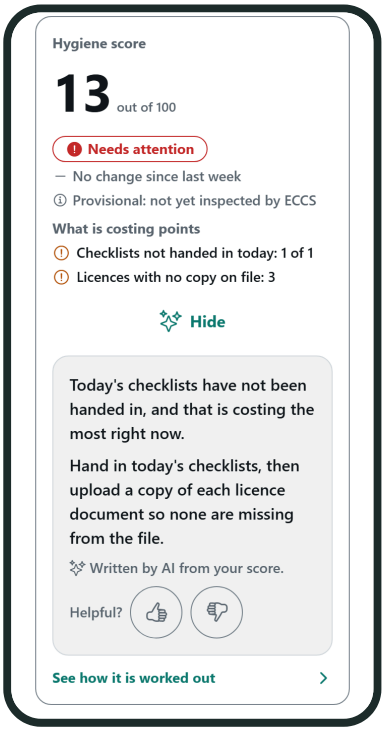

Home (sample data). Today's checklists are not done yet, so the score is low

"Why this score?" NEW

The owner or manager taps the sparkle under the score. AI writes **two short sentences**: what is costing the most points right now, and what to do first.

- It is written in the person's own language.
- It has no numbers. The numbers are in the list just above it, worked out by the app.
- The person can say whether it was helpful.

The AI only explains the score. It never sets or changes it.

The AI's two sentences (sample data, another day)

The restaurant app: daily checklists

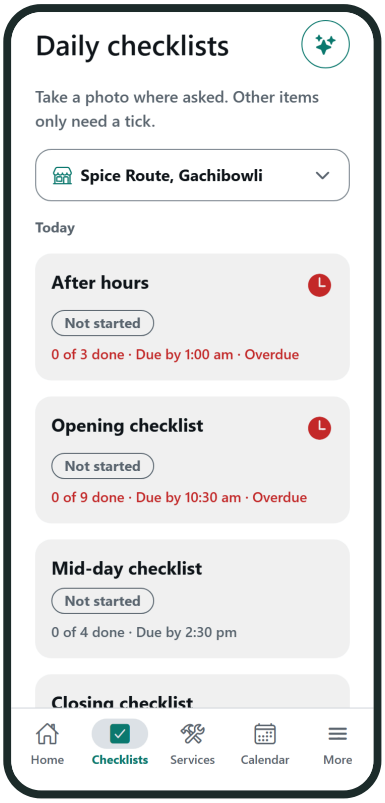

What the kitchen does every day, and how the camera helps.

Daily checklists

A checklist is a short list of things to check, for example “Kitchen floor and counters are clean” or “Fridge temperature is right”.

- There is usually one for opening, one for mid-day and one for closing. Each has a time it must be done by.
- Staff tick each item. Some items need a **photo as proof**, taken in the app.
- If something is wrong, they mark it as a problem and add a note.
- The manager or owner looks at the finished checklist and marks it as reviewed.
- The restaurant can add its own items. ECCS has a ready list of 640 checks to choose from. **New:** what the restaurant writes is put into all 12 languages by AI.
- It works with no signal.

Why owners like it: they can see from anywhere if the kitchen was cleaned, with photos. The app also notices doubtful photos, for example the same photo used twice.

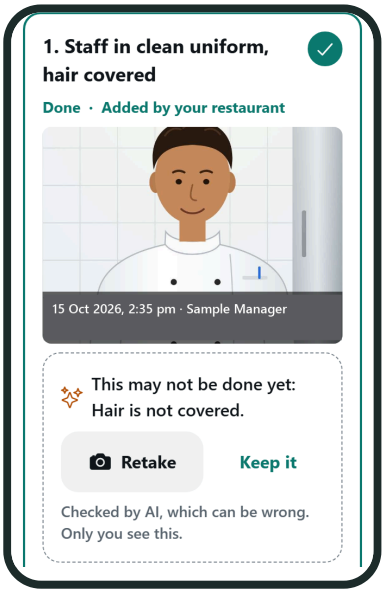

Today's checklists (sample data)

The camera check NEW

- When a proof photo is taken, AI looks at it, and at what the item asks. This works for any item, also the ones the restaurant writes itself.
- If the photo is blurred or dark, or the job looks not done, it says so. For example: “This may not be done yet: Hair is not covered.”
- The person can **Retake** the photo, or tap **Keep it** if the AI is wrong.
- It never marks, fails or reports anything. Only the person taking the photo sees it.

It needs signal. It has been tested on drawn pictures, not yet on photos from real kitchens.

The camera check on a drawn test picture

The restaurant app: services and papers

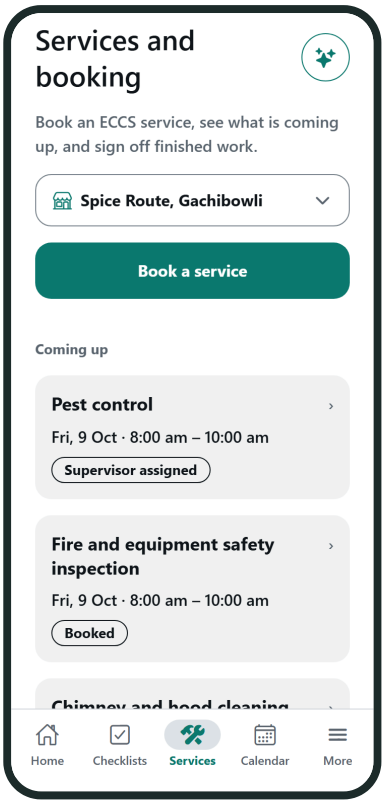

ECCS's own work, and the licences that keep a restaurant out of trouble.

Services and booking

This is where the restaurant deals with ECCS's own work.

- **Book a service** from the list, and pick a date. The owner or manager can also ask ECCS Buddy to book.
- See what is **coming up**, and which Supervisor is assigned.
- After the visit: see the **photos before and after**, and the report.
- **Sign off** the work in the app when it is finished.
- Rate the visit and raise a problem if something was not right.

The **Calendar** tab shows the past year: every checklist and every visit, day by day.

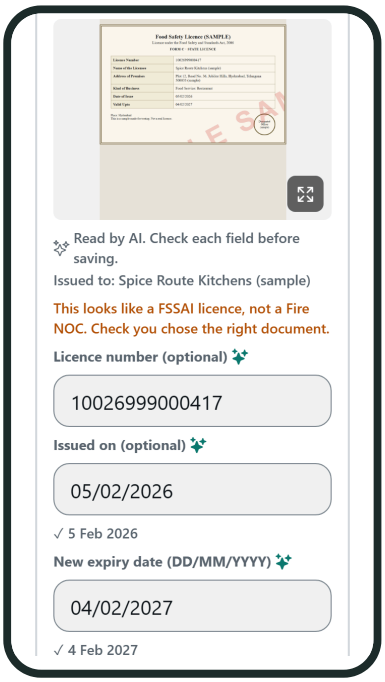

Services and booking (sample data)

Licences and documents

A restaurant needs several licences: the FSSAI licence, a trade licence, a fire certificate and others. Each one has an expiry date.

- **New:** the restaurant takes a photo of a licence, or chooses a PDF, and **AI fills in** the number, the name and the dates. The person checks each field, then saves.
- When renewing, it warns if the photo looks like a different licence.
- The app shows which licences are valid and **how many days are left**. Licences in date count towards the score.
- Reports and certificates from ECCS's services are kept here too.

Why owners like it: when an officer visits, every paper is on the phone in one place.

A sample licence, read by AI: it warns that this is not a Fire NOC

The restaurant app: labels and vendors

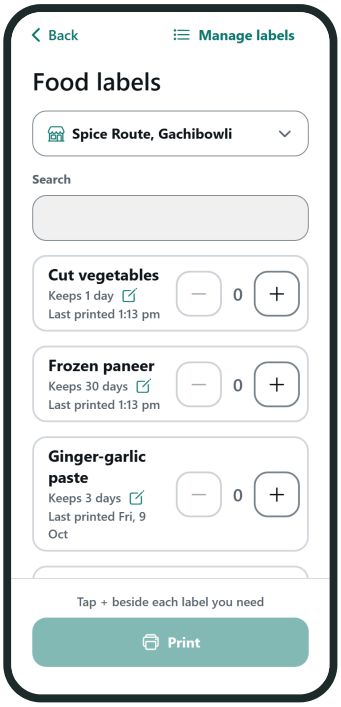

Two tools for the kitchen's everyday work.

Food labels

Food kept in a kitchen should carry a label that says what it is, when it was made, and when it must be used by.

- The kitchen saves its usual items once, for example “Cut vegetables, keeps 1 day”.
- Each day the chef taps **+** beside the items needed and presses **Print**.
- The app works out the use-by date and prints the name of the person who made it.

Printing works through the phone's own print screen today. A small label printer for the kitchen has not been chosen yet.

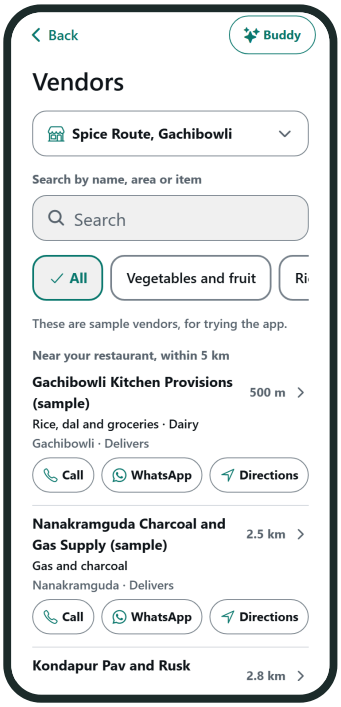

Food labels: tap +, then Print

Vendors

A list of shops and suppliers who sell in bulk to restaurants: vegetables, rice and dal, meat, dairy, packaging, gas and more.

- The **nearest to the restaurant are at the top**, with the distance.
- The owner can search, or choose a type such as “Dairy”.
- Buttons to call, send a WhatsApp message, or get directions.
- Each vendor's FSSAI number is shown, so the restaurant can check it.

> **For now the vendors are samples**, not real shops. Real vendors will be added later. ECCS does not check or recommend vendors.

Vendors, nearest first (samples)

The restaurant app: staff, and the rest

Extra tools for the owner and the manager.

Staff attendance and salary

Attendance by face

- The owner adds each employee and their face once. The employee must **agree first**, on the screen.
- Each day the employee taps Clock in / Clock out and looks at the camera. No PIN, no card.
- The app works out the day: full day, half day or absent.
- If someone does not want to use their face, the owner or manager can clock them in with a PIN instead.

Salary tracker

- The app works out each person's pay for the month from their attendance.
- The owner or manager adds overtime, bonus, advances and payments.
- It shows what is still owed to each person.
- It is a record book for the restaurant. It is **not** a payroll or PF system, and it does not send money.

Only the owner can correct attendance. A manager cannot change their own attendance or pay. The head chef does not see attendance or pay at all. Face attendance does not use the AI described in this briefing, and ECCS Buddy cannot see attendance, pay or faces.

Talking to ECCS in any language NEW

- When a restaurant raises an issue or writes to ECCS in Telugu, Hindi or another language, the ECCS office reads it in English.
- The restaurant reads ECCS's reply in its own language. The app shows “Translated by AI”, and “See original” for the words as they were written.

Also in the app's menu

- **Certificates:** given by ECCS after some services, such as pest control, with a date they are valid until.
- **SOPs:** short written steps for kitchen jobs, such as how to clean a fridge. ECCS Buddy can write a new one for the restaurant.
- **Raise an issue:** a way to tell ECCS about a problem.
- **Plan and invoices:** the restaurant's monthly plan and its bills, with GST.
- **Profile:** the person's language, and the documents they agreed to (Legal).

ECCS Buddy: the AI helper NEW

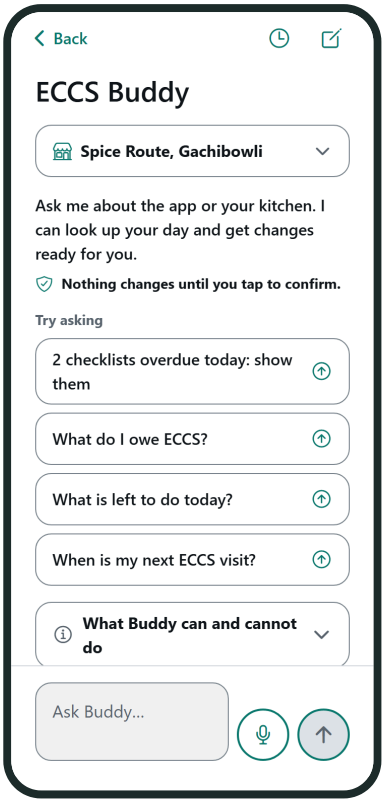

The owner or manager asks in their own words. Buddy answers, or gets a change ready for them to confirm.

Where to find it

- The round **sparkle button** at the top of the screens, the **Ask ECCS Buddy** card on Home, and the first entry in More.
- Only the **owner** and the **manager** have it. The head chef does not.

What it does

- Answers questions about the app and about running a kitchen, in the person's own language.
- Looks up their day: checklists, visits, the hygiene score, licences, invoices, issues and more.
- Suggests questions to start with, for the screen they are on and the day.

Buddy's first screen, with suggested questions (sample data)

Changes, only with a tap

- Buddy can get these ready: **book a service**, add a checklist item or a whole checklist, change when a checklist is due, **write an SOP**, save a food label, report an issue, or send ECCS a message.
- Each one comes as a **card** with the details. Nothing happens until the person taps its button, such as **Book**. Change and Cancel are on the card too.
- Some things Buddy never does: paying, uploading, the camera, signing off a visit, and anything about staff, attendance, pay or faces. For these, it gives a button that opens the right screen.

A booking, ready but not yet booked (sample prices)

ECCS Buddy: safe, and on topic

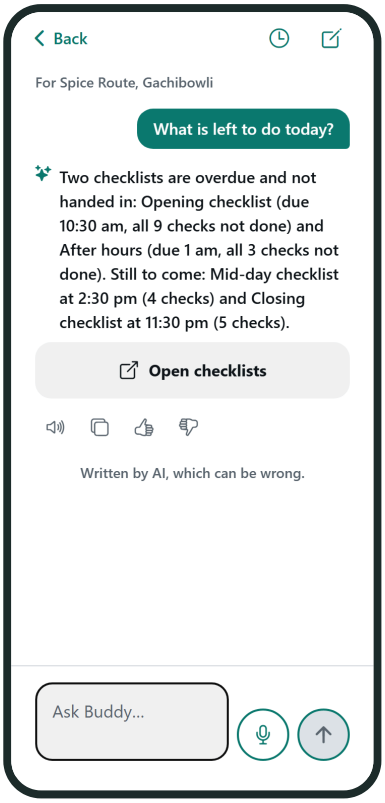

Buddy sticks to the restaurant and the app, and to that restaurant's own records.

It reads the restaurant's own records

- Ask “What is left to do today?” and Buddy lists the overdue checklists and those still to come, with a button to open them.
- It sees only that restaurant's own information, never another restaurant's.
- It will not tell anyone a PIN, a password or a one-time code.
- Under every answer the app says: “Written by AI, which can be wrong.”

Also

- **Read aloud** and **speaking instead of typing** come with the next version of the test app.

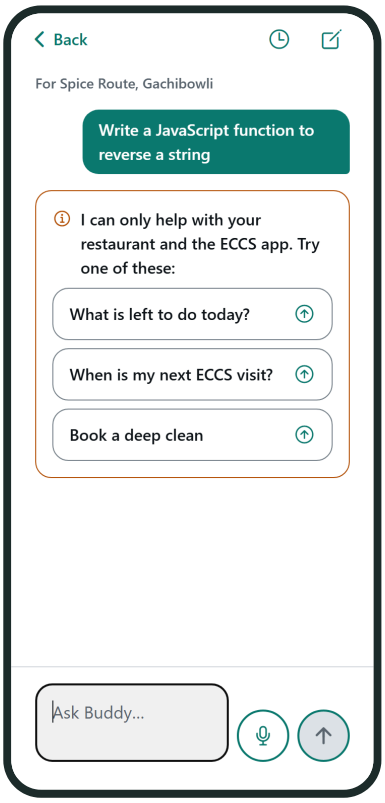

Reading the day (sample data)

Only about the restaurant and the app

- Anything else (homework, coding, politics, personal questions) gets one polite line: “I can only help with your restaurant and the ECCS app.”
- Someone who keeps trying to misuse it is paused until the next day.
- Each person has a daily limit of messages.
- Chats are kept for 30 days, then deleted.

> **In a demo**
>
> Ask “What is left to do today?”, then “Book a kitchen deep clean for Saturday morning”. Show the card, then tap **Cancel**, not Book: Book sends a real request to the ECCS office.

An off-topic question gets one polite line

The customer page

How a diner can see that the kitchen is clean.

What it is

The restaurant prints a small poster with a **QR code** and puts it on tables or at the door. A diner scans it with their phone camera. A web page opens. No app and no login are needed.

What the diner sees

- The kitchen's **hygiene score for yesterday**, out of 100.
- **Photos** of the clean kitchen.
- The **daily checklists** the kitchen does, and whether each was done yesterday.
- **ECCS's inspection** result, once ECCS has inspected.
- ECCS's recent services, such as pest control, with dates.

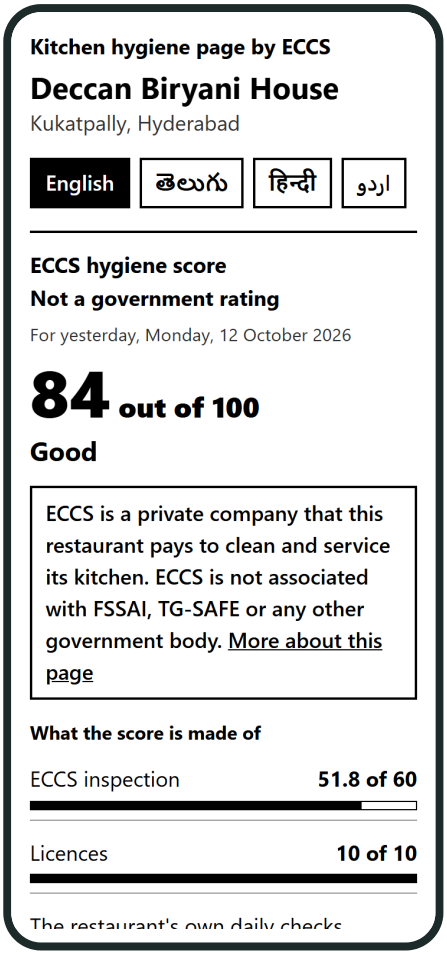

The page can be read in English, Telugu, Hindi and Urdu.

The rules of this page

- The **owner decides**. The page shows only if the owner switches it on, and the owner can switch it off at any time.
- A person chooses each photo, and **ECCS looks at every photo** before diners can see it. No faces and no staff names.
- The page never shows staff names, prices or bills.
- The page says clearly that ECCS is a private company paid by the restaurant, and that this is **not a government rating**.

Why a restaurant wants this

It turns clean work into something customers can see. A restaurant that keeps its kitchen clean can show it, and stand out from others.

The top of the customer page (a sample restaurant, made-up numbers)

The ECCS side

What our own people use.

The Supervisor, in the app

The Supervisor is the ECCS person who goes to the kitchen with the cleaning team. The cleaners themselves do not use the app; the Supervisor records the visit for them.

The Supervisor **checks in**, takes **photos before**, follows the task list and notes the chemicals used, takes **photos after**, and the restaurant's manager **signs off** on the phone. The report goes to the ECCS office to be checked, then to the restaurant.

The Supervisor also does **inspections**: a point-by-point check of the kitchen that gives a score out of 100 and a grade (A+, A or B). **New:** AI can write a first draft of the inspection summary, which the Supervisor checks and changes. The ECCS office approves each inspection report before the restaurant sees it.

The console, for the ECCS office

A website that ECCS office staff open on a computer: the control room for the whole business. Restaurants do not use it.

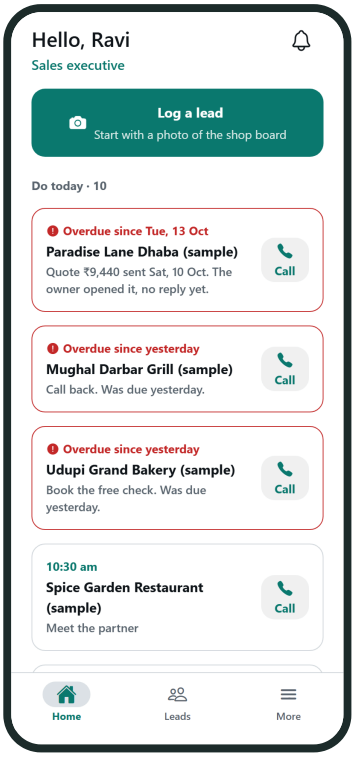

Section	What the office does there
Clients	Add a new restaurant and its branches. Create the outlet code that the restaurant types into its phone.
Visits, Inspections	Give each booked service a date and a Supervisor. Check visit reports and approve inspection reports.
Monitoring	See every kitchen on one screen: its score, missed checklists and doubtful photos. **New:** a short summary of the day at the top, written by AI.
Issues, Invoices	Answer problems that restaurants raise. Make and track bills.
Licences, Certificates	See which clients' licences are expired or about to expire (AI can read a licence photo here too), and the certificates given after services.
Customer pages, Catalogue	Approve photos for customer pages. Set up the services, the monthly plans and the SOPs.
Sales NEW	Every lead and quote, and each BDE's targets (page 18).
Team NEW	The ECCS team: who is in today, and each person's week against target. For the founders and the Operations Manager.
Finance NEW	Money in and out, budgets and expenses. For the founders only.
Logs NEW	A record of what was done in the apps and the console, and when.

Your own tools: the BDE app NEW

As a sales executive (BDE), you use the same ECCS app on your phone, with your own screens.

Logging in, and Home

- Log in with your mobile number and a one-time code, like other ECCS staff. You have three tabs: **Home**, **Leads** and **More**.
- Home has a big **Log a lead** button.
- **Do today** lists your calls, visits and follow-ups, overdue first. Each one has one button: Call, Send quote, and so on. Call opens the phone's dialler and records the call.
- Under it, your **week against your target**: leads, free checks, first jobs and plans.

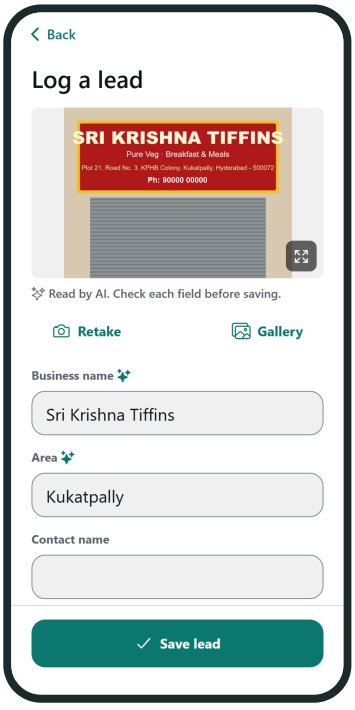

A BDE's Home (sample leads)

Log a lead from a photo of the shop board

- Take a photo of the restaurant's board. **AI reads** the name, area, address and phone number into the form.
- Check each field (a sparkle marks what the AI filled in), add the contact's name and a note, and tap **Save lead**.
- The photo stays with the lead, so the office can see it too.

No signal?

Everything you log is kept on the phone and sent when the signal comes back, with the time you really did it. Reading the board and making a quote need signal.

A drawn test board, read by AI

Your own tools: leads and the free check

How a lead moves, and how a free check turns into a quote.

The steps of a lead

New → Contacted → Check booked → Check done → Quoted → First job → On a plan

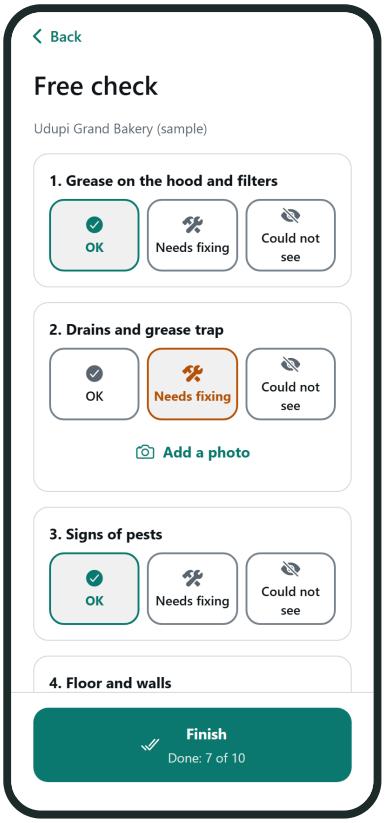

- A lead moves on **by itself** when you log a step. You never move it by hand.
- On a lead's page: **Call**, **Visited**, **Note**, and a main button for the usual next step. More steps are under it: book a free check, send a quote, park the lead until a date, or mark it lost.
- A lead with nothing logged for several days is marked as **stale**, so it is not forgotten.

The free check

A short, free look at the kitchen, with a **ten-point scorecard**: the hood and filters, drains and grease trap, pests, floor and walls, storage and labels, hand-washing, waste bins, fire extinguisher and gas, chemicals, and staff hair and uniform.

- Each point is **OK**, **Needs fixing** (with a photo), or **Could not see**.
- When you finish, **share the result with the owner on WhatsApp**: what needs fixing, and which ECCS service fixes it.
- Then **Send a quote**, with those services already ticked. It goes on WhatsApp as a link, and the app shows you when the owner opens it.

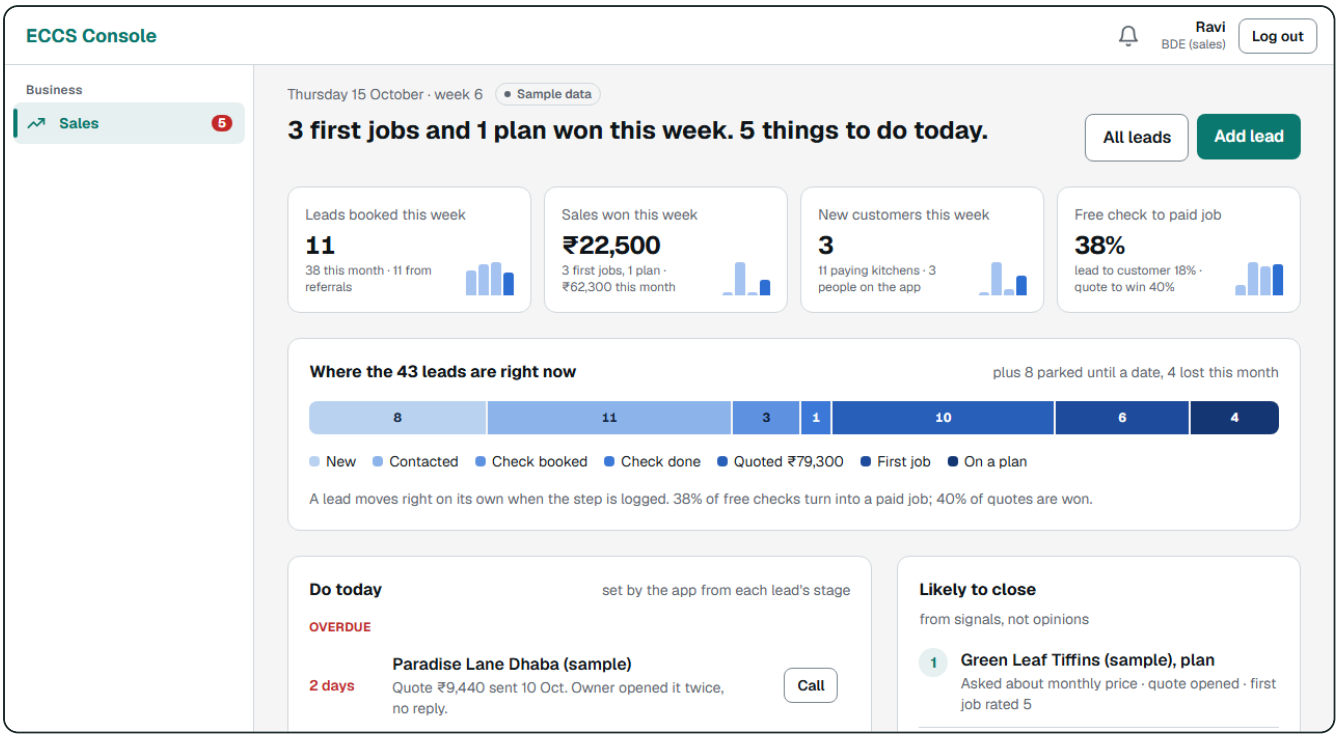

> **Quotes use the app's prices, which are samples.** Do not send a quote to a real restaurant until the founder says the prices are final.

The free-check scorecard (sample)

Sales in the console, and your week

The same leads on a computer, and how your work is counted.

The console's Sales page, as a BDE sees it (sample data)

Sales in the console

- You can also work on a computer: open the ECCS console and log in with your mobile number and a one-time code. You see **only the Sales page and your own leads**.
- It shows the same leads, steps, quotes and targets as your phone. What you log in one place shows in the other.
- At the top: this week's leads, sales won and new customers; where your leads are; **Do today**; and the leads **likely to close**, worked out from what has happened on each lead.
- The founders and the Operations Manager see every BDE's leads.

How your week is counted

- The founders see each person's week on the console's Team page. For a BDE, it shows **leads logged**, **free checks done** and **follow-ups on time** (a next step done by the time it was due), each against a target.
- Your weekly targets are set by the app each Monday from your recent weeks. The founder will tell you yours.
- Nobody marks you in or out. A day counts as worked from the first step you log on a lead that day.

How it all works together

The story of one restaurant, from the first meeting.

1. **You find a restaurant** and log the lead with a photo of its board.
2. **You meet the owner.** You explain what ECCS does and show the app on your phone.
3. **You do a free check** with the scorecard, and share the result with the owner on WhatsApp.
4. **You send a quote** (once prices are final). The owner agrees to a first job, then a plan.
5. **The ECCS office adds the restaurant** in the console, with each branch. Each branch gets an outlet code.
6. **The owner installs the app**, logs in once with a mobile number and a one-time code, agrees to the terms, and gets a PIN. The owner then adds the manager and head chef.
7. **The kitchen starts its daily checklists.** ECCS's ready checklists are there from day one.
8. **The owner saves the licences** in the app. AI can read them from a photo.
9. **ECCS's services begin.** The Supervisor visits with the team, records the work with photos, and the manager signs off. The report and any certificate appear in the app.
10. **ECCS inspects the kitchen.** The inspection gives a grade and adds up to 60 points to the hygiene score.
11. **The owner watches the score** every day, asks ECCS Buddy what to fix, and switches on the customer page.
12. **Each month** the restaurant gets its invoice in the app.

The simple idea behind it

The restaurant does a little every day (checklists). ECCS does the heavy work on a schedule (services and inspections). The app joins the two into one number the owner can understand, and one page the customer can see.

What you need for a demo

- The ECCS test app on an Android phone, with a sample login. Ask the founder for it, and check it is the newest version, with ECCS Buddy.
- Show these screens, in this order: **Home** (the score), **Daily checklists**, **Services**, **ECCS Buddy**, and the **customer page**. In Buddy, tap Cancel on any card.
- Tell the owner that the names and numbers in the demo are samples.

What is ready today, and what is not

Be honest with restaurants. It builds trust, and it keeps us out of trouble.

BUILT AND WORKING IN THE TEST APP

- ✓ Login with outlet code and PIN, and agreeing to the terms
- ✓ Home and the hygiene score, with "Why this score?"
- ✓ Daily checklists with photos, with no signal too, and the camera check
- ✓ Booking; the Supervisor's visit with photos and sign-off
- ✓ Inspections, reports and certificates
- ✓ Licences, read from a photo by AI
- ✓ Plans and invoices with GST; food labels
- ✓ Face attendance and the salary tracker
- ✓ The customer page and its QR poster
- ✓ The vendor list, with sample vendors
- ✓ ECCS Buddy, for owners and managers
- ✓ Your BDE screens, and Sales in the console
- ✓ The console for the office; 12 languages

NOT READY YET

- ✗ **No restaurant is using the app yet.** Only we have tested it.
- ✗ **ECCS is not yet a registered company.**
- ✗ **Prices are not final.** Those in the app and in quotes are samples.
- ✗ **Online payment is not real yet.**
- ✗ **Android only, and not on the Play Store.** We install a test version by hand.
- ✗ **The app sends no SMS or WhatsApp yet.** You send quotes from your own WhatsApp.
- ✗ **The terms and privacy documents** are drafts that a lawyer is checking.
- ✗ **The AI features are new:** tested on drawn pictures and sample data, not in real kitchens.
- ✗ **ECCS Buddy and your BDE screens** come with the next version of the test app on phones.
- ✗ **The vendors are samples.** The translations are not yet checked by native speakers.
- ✗ No label printer is chosen. The app runs on our office computer, not a live server.

BECAUSE OF THIS

- **Do not sign any agreement and do not take any money** from a restaurant until the founder tells you we are ready.
- For now, your job is to **find interested restaurants and learn what they need**. Log each one as a lead, with what the owner says.
- If an owner asks for something that is in the "not ready yet" list, say: "That is coming. I will check the date and tell you." Then ask the founder.

This page is true on 19 October 2026. Things change fast. Ask the founder for the newest version before an important meeting.

What to say, and what not to say

A few words can cause a legal problem. Please learn this page.

About the government and FSSAI

FSSAI is the government body for food safety in India. **ECCS is a private company. We are not part of FSSAI or of any government office, and we are not linked to them.**

YOU CAN SAY

- ✓ "ECCS is a private company that cleans and services your kitchen."
- ✓ "This is ECCS's own hygiene score."
- ✓ "We help you stay ready for an inspection."

NEVER SAY

- ✗ "This is a government rating" or "an FSSAI rating".
- ✗ "FSSAI approved" or "government certified".
- ✗ "You will pass your FSSAI inspection." "Your food is guaranteed safe."

About AI and ECCS Buddy NEW

YOU CAN SAY

- ✓ "The app uses AI to save you time. You always check, and it never changes anything by itself."
- ✓ "Buddy gets a booking ready. Nothing is booked until you tap."

NEVER SAY

- ✗ "The AI checks that your kitchen is clean and safe."
- ✗ "The AI is always right."
- ✗ "Buddy can pay your bills or manage your staff."

About prices and promises

- ✗ Do not give a price, or send a quote, that the founder has not given you.
- ✗ Do not promise a date for something that is not ready (see page 20).
- ✗ Do not promise that ECCS will pay for a fine or a failed inspection.

About staff faces and privacy

- ✓ Face attendance needs each employee to **agree**. An employee can say no, and can change their mind later.
- ✓ To know a face, the app keeps a locked code made from it, not a photo. The code is deleted when the person leaves or says no. A small photo taken at each clock-in is deleted after 35 days.
- ✓ Staff records and salary are private to the restaurant. ECCS cannot see them, and neither can Buddy.
- ✓ ECCS lists vendors to help, but does not check or recommend them.

If you are not sure, say: "I do not want to tell you something wrong. Let me check and come back to you."

Questions owners ask

Simple answers you can use.

"Is this from the government?"

No. ECCS is a private company. The score and the inspection are our own. We help you keep your kitchen ready, but we are not FSSAI.

"My staff cannot read English."

The app is in 12 languages, and each person picks their own. Most steps are a tick or a photo, with clear pictures.

"The network in my kitchen is bad."

Checklists work with no signal. The phone saves the work and sends it when the signal comes back.

"Do I have to buy new phones?"

No. Any Android phone from the last few years works (Android 8 or newer). One phone can be shared, because everyone has their own PIN. There is no iPhone version yet.

"I have several branches."

The owner sees all branches in one app and can switch between them. Each manager sees only their own branch.

"Who can see my information?"

Your staff, attendance and salary records are private to you. ECCS cannot open them. ECCS sees your hygiene work, such as whether checklists were done, so that we can help you.

"What if my staff cheat on the checklist?"

Many items need a photo taken inside the app, at that moment. The app notices when the same photo is used again, or when a photo was taken far from the kitchen.

"Will my customers see a bad score?"

Only if you switch the customer page on. You decide, and you can switch it off at any time.

"I already have a pest control company."

You can start with the services you do not have. The app and the daily checklists are useful from the first day.

"How much does it cost?"

We have a monthly plan and single services. I will bring you the exact price. (Then ask the founder. Do not guess.)

"Can I pay in the app?"

You will see your invoices in the app. Online payment is being set up and is not ready yet.

"Can you guarantee I will pass an inspection?"

Nobody can promise that. What we can do is keep your kitchen clean, keep your papers in order, and show you every day what needs fixing.

Questions about AI and Buddy NEW

More answers you can use.

“What is ECCS Buddy?”

A helper inside the app for you and your manager. Ask it anything about your kitchen or the app, in your own language. It can tell you what is left to do today, when ECCS is coming next, or write an SOP for you.

“Can Buddy book or change things by itself?”

No. It gets the booking or the change ready on a card, with the details. Nothing happens until you tap to confirm. It cannot pay, and it cannot touch your staff, attendance or salaries.

“Can my head chef use Buddy?”

No. Only the owner and the managers have Buddy.

“Will the AI fail my checklist?”

No. When it thinks a photo shows a job not done, it tells the person taking the photo, who can take it again or keep it. It never marks, fails or reports anything, and it never changes your score.

“Can the AI be wrong?”

Yes, sometimes. That is why a person always checks what it reads or writes, and why the app says “Written by AI, which can be wrong.”

“Who sees the photos and messages the AI reads?”

Only what a feature needs is sent to the AI service to be read: the photo, the licence or the message, or what you ask Buddy. Your attendance, salaries and face data are never sent to it. Buddy's chats are deleted after 30 days. (If an owner wants more detail, ask the founder.)

“Do I have to agree to anything?”

Yes. At your first login, you agree to ECCS's terms and privacy policy for your restaurant. You can read them before you agree, and again at any time in the app's Profile.

“Can I speak to Buddy instead of typing?”

It answers in your language when you type. Speaking to it is coming in the next version of the app.

Words you will hear

And how to run your first meeting.

FSSAI	The Food Safety and Standards Authority of India: the government body for food safety rules and licences.
FSSAI licence	The licence every food business must have, with a 14-digit number.
Outlet	One branch of a restaurant, at one address.
Checklist	A short list of things to check and tick, such as the opening one.
SOP	Standard Operating Procedure. The written steps for doing a job the right way, every time.
Hygiene score	ECCS's own number out of 100 for a kitchen. Not a government rating.
Inspection	A point-by-point check by an ECCS Supervisor, with a score and a grade.
Supervisor	The ECCS person who goes to the kitchen and records the work in the app.
BDE	Business development executive, also called sales executive. You.
Lead	A restaurant that might become a customer, logged in the app.
Free check	A short, free look at a kitchen by a BDE, with the ten-point scorecard.
AI	Artificial intelligence: software that can read, write and look at photos. It can be wrong.
ECCS Buddy	The AI helper in the app, for the owner and the manager.
QR code	A square pattern that a phone camera can read. It opens the customer page.
Grease trap	A box under the sink that catches oil and fat before the drain.

Your first meeting, in five steps

1. **Ask first.** "Who cleans your chimney? How do you know the kitchen was cleaned last night?" Let the owner talk.
2. **Say the line.** "ECCS cleans and services your kitchen, and gives you an app that shows it is done, every day."
3. **Show, do not explain.** Open the app. Show Home, a checklist, Services and ECCS Buddy. Two minutes is enough.
4. **Be honest about today.** "We are starting with a small group of restaurants. You would be one of the first."
5. **Agree the next step.** Offer a free check. Log the lead and the next step in your app before you leave, and do it when you said you would.

Any question this paper does not answer: ask the founder. It is always fine to ask.
